

Title: LL122 0 to 20mA

Product number: LL122

Brochure Number:

General:

Operation: Some industrial equipment uses a 0 to 20mA signal for communication purposes. The LL122 device is used to convert this analogue signal an optical signal, which is then sent on an optical fibre cable for anything up to 25km, at the end of which it is received by another LL122 device and converted back to electrical signal. Then distance over which the signal is sent is dependent on the optics specified at the time of ordering.
