

Title: LL300/4 single/4 channel telephone extender system

Product number: LL304

Brochure Number:

General:

Operation: The system comes in a single channel (LL300) or a 4 channel (LL304) version. Each version consists of two separate units. The LL300E for exchange side and LL300T for telephone side. The one unit is connected to the telephone exchange or PABX line and the other is connected directly to the telephone instrument.

What happens here in the case of the LL300 is the analogue signals from the telephone is received by the LL300T and is then converted to a series of optical data signals that is transmitted through the fibre the LL300E unit. The LL300E unit then converts the optical signals back to electrical signals which then goes through to the exchange.

The LL304 system operates in the same way as the LL300 system except that it can have up to 4 telephones connected to it
