

Title: OS422 single channel RS422/485 interface

Product number: OS422

Brochure Number:

General:

Operation: The OS422 is a media changer that converts the electrical data signals from 2W(2-wire)RS485 or 4W(4-wire)RS422 protocol to optical signals sent along optical fibres. The OS422 unit on the other side will then receive the optical signal and convert it back to the corresponding electrical data signal, either 2-wire or 4-wire.

One has the option of configuring the unit for point to point communication were only two units exchange data or party line communication in which any number of units can exchange data.

Single channel OS422/485 fibre interface  
requires external psu
