

OS8422 2 channel RS232/422 optical fibre interface card

The OS8422 card provides 2 RS232/422 data channels and is designed to be used in the OS800 rack system to provide control over the pan-tilt units. The data channels can in fact be used for any purpose requiring RS232 or RS422 in the security system and is in fact ideal for access control applications. The OS8422 card is just another example of the flexibility of the OS800 system. These cards provide a data rate of 19.2 Kbits/sec
