

Title: LL4004 4-channel 2Mbit G703 interface unit.

Product number: LL4004

Brochure Number:

General:

Operation: The LL4004 unit combines 4 channels of 2Mbps G703 bi-directional data and transmits it over one pair of fibres. The LL4004 unit on the receiving end then converts the optical signal back to the 4 channels of data. The channels are totally independent of each other and can be independently clocked. On the electrical side, the input is either 75 ohm or 120 ohm as required.
