

Title:OS807 single channel voice on fibre

Product number:OS807

Brochure Number:

General:

Operation: The OS807 card provides a high quality, bi-directional voice channel over a pair of optical fibres. The card is designed to fit into the OS800 rack as part of a system, or it can be configured with its own on board power supply and fitted into the OS740 small metal box as a stand alone unit. As is the current practise, the electrical input to the card is via an RJ45 plug, and the optical interface is via the industry standard ST connectors.
